## Web Server Directory Enumeration

---

### Synopsis

It is possible to enumerate directories on the web server.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

The following directories were discovered:

/cgi-bin, /sites, /docs, /icons

While this is not, in and of itself, a bug, you should manually inspect these directories to ensure that they are in compliance with company security standards

The following directories require authentication:

/manager/html

---

### Description

This plugin attempts to determine the presence of various common directories on the remote web server. By sending a request for a directory, the web server response code indicates if it is a valid directory or not.

---

### Solution

n/a

---

### See also

<http://projects.webappsec.org/Predictable-Resource-Location>

---

### Risk Factor

None

---

## Browsable Web Directories

### Synopsis

Some directories on the remote web server are browsable.

### List of Hosts

## 10.95.105.126

### Plugin Output

The following directories are browsable :

http://testdevelenvsec.hi.inet/widgets/  
http://testdevelenvsec.hi.inet/widgets/?C=N;O=D  
http://testdevelenvsec.hi.inet/widgets/?C=M;O=A  
http://testdevelenvsec.hi.inet/widgets/?C=S;O=A  
http://testdevelenvsec.hi.inet/widgets/?C=D;O=A

---

### Description

Miscellaneous Nessus plugins identified directories on this web server that are browsable.

---

### Solution

Make sure that browsable directories do not leak confidential informative or give access to sensitive resources. And use access restrictions or disable directory indexing for any that do.

---

### See also

<http://projects.webappsec.org/Directory-Indexing>

---

### Risk Factor

None

---

### PORT WWW (80/TCP)

Plugin ID: [57640](#)

### Web Application Information Disclosure

---

#### Synopsis

The remote web application discloses path information.

#### List of Hosts

## 10.95.105.126

### Plugin Output

The request GET /sonar/?sort=%00yaaihb HTTP/1.1  
Host: testdevelenvsec.hi.inet  
Accept-Charset: iso-8859-1,utf-8;q=0.9,\*;q=0.1  
Accept-Language: en  
Connection: Keep-Alive  
User-Agent: Mozilla/4.0 (compatible; MSIE 8.0; Windows NT 5.1; Trident/4.0)  
Pragma: no-cache  
Accept: image/gif, image/x-bitmap, image/jpeg, image/pjpeg, image/png, \*/\*

produces the following path information :

```
<li class="">
<a href="/sonar/plugins/home/org.sonar.plugins.motionchart.MotionChartPa
ge">Motion chart</a></li>

<li class="">
```

---

## Description

At least one web application hosted on the remote web server discloses the physical path to its directories when a malformed request is sent to it.

Leaking this kind of information may help an attacker fine-tune attacks against the application and its backend.

---

## Solution

Filter error messages containing path information.

---

## Risk Factor

Plugin ID: [46180](#)

## Additional DNS Hostnames

---

### Synopsis

Potential virtual hosts have been detected.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

- testdevelenvsec

---

## Description

Hostnames different from the current hostname have been collected by miscellaneous plugins. Different web servers may be hosted on name-based virtual hosts.

---

## Solution

If you want to test them, re-scan using the special vhost syntax, such as :

[www.example.com\[192.0.32.10\]](http://www.example.com[192.0.32.10])

---

### Description

The remote web server contains at least HTML form field containing an input of type 'password' where 'autocomplete' is not set to 'off'.

While this does not represent a risk to this web server per se, it does mean that users who use the affected forms may have their credentials saved in their browsers, which could in turn lead to a loss of confidentiality if any of them use a shared host or their machine is compromised at some point.

---

### Solution

Add the attribute 'autocomplete=off' to these fields to prevent browsers from caching credentials.

---

### Risk Factor

None

---

**Description**

Some generic CGI tests ran out of time during the scan.

The results may be incomplete.

---

**Solution**

Run your run scan again with a longer timeout or less ambitious options :

- Combinations of arguments values = 'all combinations' is much slower than 'two pairs' or 'single'.
  - Stop at first flaw = 'per port' is quicker.
  - In 'some pairs' or 'some combinations' mode, try reducing web\_app\_tests.tested\_values\_for\_each\_parameter in nessusd.conf
- 

**Risk Factor**

None

**PORT (0/TCP)**

Plugin ID: [54615](#)

**Device Type****Synopsis**

It is possible to guess the remote device type.

**List of Hosts**

[10.95.105.126](#)

**Plugin Output**

Remote device type : general-purpose

Confidence level : 95

---

**Description**

Based on the remote operating system, it is possible to determine what the remote system type is (eg: a printer, router, general-purpose computer, etc).

---

**Solution**

n/a

**Risk Factor**

None

**Plugin publication date:** 2011/05/23**Plugin last modification date:** 2011/05/23**PORT SSH (22/TCP)**Plugin ID: [39520](#)**Backported Security Patch Detection (SSH)****Synopsis**

Security patches are backported.

**List of Hosts**[10.95.105.126](#)**Plugin Output**

Give Nessus credentials to perform local checks.

**Description**

Security patches may have been 'back ported' to the remote SSH server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

**Solution**

N/A

None

**Plugin publication date:** 2009/06/25**Plugin last modification date:** 2011/03/16**PORT (0/UDP)**Plugin ID: [10287](#)**Traceroute Information****Synopsis**

It was possible to obtain traceroute information.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

For your information, here is the traceroute from 10.95.146.127 to 10.95.105.126 :

10.95.146.127  
10.95.146.1  
10.52.255.227  
10.95.105.126

---

### Description

Makes a traceroute to the remote host.

---

### Solution

n/a

---

### Risk Factor

None

**Plugin last modification date:** 2012/01/30

### PORT (0/TCP)

Plugin ID: [18261](#)

### Apache Banner Linux Distribution Disclosure

---

### Synopsis

The name of the Linux distribution running on the remote host was found in the banner of the web server.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

The linux distribution detected was :

- Ubuntu 11.10 (oneiric)

---

### Description

This script extracts the banner of the Apache web server and attempts to determine which Linux distribution the remote host is running.

---

### Solution

If you do not wish to display this information, edit httpd.conf and set the directive 'ServerTokens Prod' and restart Apache.

---

### Risk Factor

None

## CGI Generic Injectable Parameter

---

### Synopsis

Some CGIs are candidate for extended injection tests.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

Using the GET HTTP method, Nessus found that :

- + The following resources may be vulnerable to injectable parameter :
- + The 'q' parameter of the /jenkins/view/All/job/web-calculator/search/ CGI :

/jenkins/view/All/job/web-calculator/search/?q=%00yaaihb

----- output -----

```
<title>Search for '.yaaihb' [Jenkins]</title><link rel="stylesheet" type [...]>
var _gaq = _gaq || [];
_gaq.push(['_setAccount', 'UA-8116005-4']);
```

- + The 'q' parameter of the /jenkins/view/All/job/PythonExample/search/ CGI :

/jenkins/view/All/job/PythonExample/search/?q=%00yaaihb

----- output -----

```
<title>Search for '.yaaihb' [Jenkins]</title><link rel="stylesheet" type [...]>
var _gaq = _gaq || [];
_gaq.push(['_setAccount', 'UA-8116005-4']);
```

- + The 'q' parameter of the /jenkins/view/All/job/j2meSample/lastCompletedBuild/search/ CGI :

/jenkins/view/All/job/j2meSample/lastCompletedBuild/search/?q=%00yaaihb

----- output -----

```
<title>Search for '.yaaihb' [Jenkins]</title><link rel="stylesheet" type [...]>
var _gaq = _gaq || [];

```

-----

---

## Description

Nessus was able to inject innocuous strings into CGI parameters and read them back in the HTTP response.

The affected parameters are candidates for extended injection tests like cross-site scripting attacks.

This is not a weakness per se, the main purpose of this test is to speed up other scripts. The results may be useful for a human pen-tester.

---

## Solution

n/a

---

## Risk Factor

Low

---

**Description**

This script computes the maximum number of requests that would be done by the generic web tests, depending on miscellaneous options.  
It does not perform any test by itself.

The results can be used to estimate the duration of these tests, or the complexity of additional manual tests.

Note that the script does not try to compute this duration based

on external factors such as the network and web servers loads.

## PORT (0/TCP)

Plugin ID: [11936](#)

---

## OS Identification

---

### Synopsis

It is possible to guess the remote operating system.

---

### List of Hosts

## 10.95.105.126

### Plugin Output

Remote operating system : Linux Kernel 3.0 on Ubuntu 11.10 (oneiric)  
Confidence Level : 95  
Method : SSH

The remote host is running Linux Kernel 3.0 on Ubuntu 11.10 (oneiric)

---

### Description

Using a combination of remote probes, (TCP/IP, SMB, HTTP, NTP, SNMP, etc...) it is possible to guess the name of the remote operating system in use, and sometimes its version.

---

### Solution

N/A

---

### Risk Factor

None

**PORT MDNS (5353/UDP)**

Plugin ID: [12218](#)

---

**mDNS Detection****Synopsis**

It is possible to obtain information about the remote host.

**List of Hosts**

[10.95.105.126](#)

**Plugin Output**

Nessus was able to extract the following information :

- mDNS hostname : testdevelenvsec.local.
  - Advertised services :
    - o Service name : testdevelenvsec [00:50:56:91:02:ff].\_workstation.\_tcp.local.
  - Port number : 9
  - CPU type : X86\_64
  - OS : LINUX
- 

### Description

The remote service understands the Bonjour (also known as ZeroConf or mDNS) protocol, which allows anyone to uncover information from the remote host such as its operating system type and exact version, its hostname, and the list of services it is running.

---

### Solution

Filter incoming traffic to UDP port 5353 if desired.

---

### Risk Factor

### PHP expose\_php Information Disclosure

---

#### Synopsis

The configuration of PHP on the remote host allows disclosure of sensitive information.

#### List of Hosts

10.95.105.126

#### Plugin Output

Nessus was able to verify the issue using the following URL :

<http://testdevelenvsec.hi.inet/widgets/jenkinsViewBuiltBy.php/?=PHPB8B5F2A0-3C92-11d3-A3A9-4C7B08C10000>

---

### Description

The PHP install on the remote server is configured in a way that allows disclosure of potentially sensitive information to an attacker through a special URL. Such an URL triggers an Easter egg built into PHP itself.

Other such Easter eggs likely exist, but Nessus has not checked for them.

---

**Solution**

In the PHP configuration file, php.ini, set the value for 'expose\_php' to 'Off' to disable this behavior. Restart the web server daemon to put this change into effect.

---

**Description**

Nessus gathered HREF links to external sites by crawling the remote web server.

---

**Solution**

n/a

---

**Risk Factor**

None

---

**Plugin publication date:** 2010/10/04

**Plugin last modification date:** 2011/08/19

**PORT WWW (5556/TCP)**

Plugin ID: [10195](#)

**HTTP Proxy Open Relay Detection**

---

**Synopsis**

The remote web proxy server accepts requests.

**List of Hosts**

[10.95.105.126](#)

---

**Description**

The remote web proxy accepts unauthenticated HTTP requests from the Nessus scanner. By routing requests through the affected proxy, a user may be able to gain some degree of anonymity while browsing web sites, which will see requests as originating from the remote host itself rather than the user's host.

---

**Solution**

Make sure access to the proxy is limited to valid users / hosts.

---

**Risk Factor**

None

---

**Plugin publication date:** 1999/06/22

**Plugin last modification date:** 2011/11/29

**PORT WWW (80/TCP)**

---

### Description

HTTP cookies are pieces of information that are presented by web servers and are sent back by the browser. As HTTP is a stateless protocol, cookies are a possible mechanism to keep track of sessions.

This plugin displays the list of the HTTP cookies that were set by the web server when it was crawled.

---

### Solution

n/a

---

### Risk Factor

None

**PORT WWW (4445/TCP)**

Plugin ID: **40406**

**CGI Generic Tests HTTP Errors****Synopsis**

Nessus encountered errors while running its generic CGI attacks.

**List of Hosts**

10.95.105.126

**Plugin Output**

Nessus encountered :

- 1 error involving SQL injection (on HTTP headers) checks :

---

**Description**

Nessus ran into trouble while running its generic CGI tests against the remote web server (for example, connection refused, timeout, etc). When this happens, Nessus aborts the current test and switches to the next CGI script on the same port or to another web server. Thus, test results may be incomplete.

---

**Solution**

Rescan with a longer network timeout or less parallelism for example, by changing the following options in the scan policy :

- Network -> Network Receive Timeout (check\_read\_timeout)
  - Options -> Number of hosts in parallel (max\_hosts)
  - Options -> Number of checks in parallel (max\_checks)
- 

**Risk Factor**

None

---

**Plugin publication date:** 2009/07/28

**Plugin last modification date:** 2011/09/21

**PORT WWW (80/TCP)****Plugin ID:** [40406](#)**CGI Generic Tests HTTP Errors**

---

**Synopsis**

Nessus encountered errors while running its generic CGI attacks.

**List of Hosts**[10.95.105.126](#)**Plugin Output**

Nessus encountered :

- 33 errors involving SQL injection (on HTTP headers) checks :

---

**Description**

Nessus ran into trouble while running its generic CGI tests against the remote web server (for example, connection refused, timeout, etc). When this happens, Nessus aborts the current test and switches to the next CGI script on the same port or to another web server. Thus, test results may be incomplete.

---

**Solution**

Rescan with a longer network timeout or less parallelism for example, by changing the following options in the scan policy :

**Plugin publication date:** 2009/07/28**Plugin last modification date:** 2011/09/21**PORT (0/TCP)****Plugin ID:** [45590](#)**Common Platform Enumeration (CPE)**

---

**Synopsis**

It is possible to enumerate CPE names that matched on the remote system.

**List of Hosts**[10.95.105.126](#)**Plugin Output**

The remote operating system matched the following CPE :

cpe:/o:canonical:ubuntu\_linux:11.10

Following application CPE's matched on the remote system :

cpe:/a:openbsd:openssh:5.8

cpe:/a:apache:http\_server:2.2.20

---

## Description

By using information obtained from a Nessus scan, this plugin reports CPE (Common Platform Enumeration) matches for various hardware and software products found on a host.

Note that if an official CPE is not available for the product, this plugin computes the best possible CPE based on the information available from the scan.

**PORT (0/ICMP)**

Plugin ID: [10114](#)

---

**ICMP Timestamp Request Remote Date Disclosure**

---

**Synopsis**

It is possible to determine the exact time set on the remote host.

**List of Hosts**

[10.95.105.126](#)

**Plugin Output**

The difference between the local and remote clocks is -6810 seconds.

---

**Description**

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine.

This may help an attacker to defeat all time-based authentication protocols.

---

**Solution**

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

---

**Risk Factor**

[CVE-1999-0524](#)

---

**Other references**

[OSVDB:94](#)

[CWE:200](#)

---

**Vulnerability publication date:** 1995/01/01

**Plugin publication date:** 1999/08/01

**Plugin last modification date:** 2011/11/15

**PORT WWW (4445/TCP)**

Plugin ID: [10662](#)

## Web mirroring

---

### Synopsis

Nessus crawled the remote web site.

### List of Hosts

[10.95.105.126](#)

### Plugin Output

The following CGI have been discovered :

Syntax : cginame (arguments [default value])

/grid/console (config [true] configDebug [true] )

---

### Description

This script makes a mirror of the remote web site(s) and extracts the list of CGIs that are used by the remote host.

It is suggested that you change the number of pages to mirror in the 'Options' section of the client.

---

### Solution

n/a

---

### Risk Factor

None

---

**Plugin publication date:** 2001/05/04

**Plugin last modification date:** 2012/01/04

**PORT WWW (80/TCP)**

Plugin ID: [10662](#)

## Web mirroring

## Description

This script makes a mirror of the remote web site(s) and extracts the list of CGIs that are used by the remote host.

It is suggested that you change the number of pages to mirror in the 'Options' section of the client.

## Solution

n/a

## Risk Factor

None

**Description**

The remote web server contains several HTML form fields containing an input of type 'password' which transmit their information to a remote web server in cleartext.

An attacker eavesdropping the traffic between web browser and server may obtain logins and passwords of valid users.

---

**Solution**

Make sure that every sensitive form transmits content over HTTPS.

---

**Risk Factor**

Low/ CVSS Base Score: 2.6  
(CVSS2#AV:N/AC:H/Au:N/C:P/I:N/A:N)

**Backported Security Patch Detection (WWW)**

---

**Synopsis**

Security patches are backported.

**List of Hosts**

[10.95.105.126](#)

**Plugin Output**

Give Nessus credentials to perform local checks.

---

**Description**

Security patches may have been 'back ported' to the remote HTTP server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

#### PORT WWW (4445/TCP)

Plugin ID: [10386](#)

#### Web Server No 404 Error Code Check

---

##### Synopsis

The remote web server does not return 404 error codes.

##### List of Hosts

[10.95.105.126](#)

##### Plugin Output

The following title tag will be used :

Selenium Grid2.0 help

---

##### Description

The remote web server is configured such that it does not return '404 Not Found' error codes when a nonexistent file is requested, perhaps returning instead a site map, search page or authentication page.

Nessus has enabled some counter measures for this. However, they might be insufficient. If a great number of security holes are produced for this port, they might not all be accurate.
